PROFILE

Master's student in Computer Engineering and Systems Security (2I2S) at the Faculty of Sciences of Rabat, specializing in cybersecurity as well as network and systems administration. Currently seeking an internship in the fields of cybersecurity, network administration, and systems security.

EXPERIENCE

- 2025 – 2026 **Huawei ICT Competition 2025-2026**
Competitor (Network Track). Obtained 2nd place nationally
In-depth expertise in Datacom, security, and Huawei WLAN solutions.
- 07/2024 **AMSSNuR (Rabat)**
IT Intern
Optimization of an internal press review platform and development of web interfaces.

EDUCATION

- 2025 – Present **Master's in Computer Engineering and Systems Security (2I2S)**
Faculty of Sciences, Rabat
- 2024 – 2025 **Bachelor's Degree in Mathematical and Computer Sciences (SMI)**
Faculty of Sciences, Rabat
- 2022 – 2024 **Diploma of General University Studies (DEUG) in Mathematical and Computer Sciences (SMI)**
Faculty of Sciences, Rabat
- 2022 – 2022 **Baccalaureate in Physical Sciences (Honors: Very Good)**
Lycée Louis Le Grand, Rabat

PROJECTS

- MITM Attack Simulation & Securing (Kali Linux)**
Set up an attack laboratory via bidirectional ARP Spoofing to intercept HTTP traffic (cleartext data). Detailed analysis of frames via Wireshark. Secured the infrastructure by implementing static ARP entries and migrating to an encrypted HTTPS stream (analysis of the SSL/TLS handshake).
- Automated CI/CD & Containerized Microservices**
Developed a task manager (Spring Boot/React) serving as a PoC for a DevOps pipeline. Full containerization (Docker), test and build automation via GitLab CI/CD, and deployment orchestration on a Kubernetes (K8s) cluster with persistent volume management for MySQL 8.
- Distributed Smart Urban Traffic Platform**
Created an event-driven distributed platform to resolve urban congestion in real time. Used Java (JAX-WS, RMI), Apache Kafka for asynchronous Pub/Sub communication, and React with WebSockets for a live dashboard. Managed the execution of remote actuators for traffic lights.
- Smart City IoT Platform**
Developed an IoT platform to optimize the energy consumption of public lighting. Implemented a Python/FastAPI backend, MQTT communication for Edge devices, and integrated a predictive maintenance AI model with Scikit-Learn for the automatic detection of electrical anomalies.
- NASDAQ Stock Predictor (Graduation Project)**
Developed a trading bot based on Deep Learning (LSTM) in Python (TensorFlow/Keras). Set up an interactive interface (Tkinter) for real-time visualization and performance analysis. Managed the non-stationarity of financial data and optimized hyperparameters to counter overfitting.

TECHNICAL SKILLS

- | | | | |
|---|---|---|---|
| Security & Networks
Ethical Hacking (MITM, Spoofing), Wireshark, Datacom, WLAN, VPN, Firewalls, Network Security, IPv4/IPv6, STP. | DevOps & Cloud
GitLab CI/CD, Docker & Compose, Kubernetes, Nginx, GitHub Actions. | Development
Java 17 (Spring Boot), Python (FastAPI, Scikit-Learn), C, PHP, React, JAX-WS, RMI, HTML, CSS, js. | Data
MySQL 8, PostgreSQL, Kafka, MQTT (HiveMQ). |
|---|---|---|---|

LANGUAGES

- | | | |
|-------------------------|----------------------------|-----------------------------------|
| Arabic
Native | French
Bilingual | English
Technical level |
